Cover

Stunted dendritic branches and smaller cell bodies in the brains of individuals with schizophrenia indicate neurons under stress. New data suggest that cannabis use has significant long-term negative consequences for the cognitive function of schizophrenia patients. Articles by Hashimoto et al. (p. 479) and Rais et al. (p. 490) are discussed in the editorial by Freedman (p. 416). The cover shows a modified view of a filled chandelier cell. The figure is adapted from Krimer LS, Zaitsev AV, Czanner G, Kröner S, González-Burgos G, Povysheva NV, Iyengar S, Barrionuevo G, Lewis DA: "Cluster Analysis-Based Physiological Classification and Morphological Properties of Inhibitory Neurons in Layers 2–3 of Monkey Dorsolateral Prefrontal Cortex," *J Neurophysiol* 2005; 94:3009–3022.
